

A stroke of genius

All of Incotec's high-performance GeniusCoat products are developed to enhance crop performance. Their components nurture and support the plant's development and enhance the seedling's ability to tap into nature's goodness. GeniusCoat provides the best possible conditions for a robust and healthy start to the crop.

- Ready-to-use formulations that are easy to apply
- Compatible with commonly used plant protection products
- High abrasion resistance
- High quality cosmetic appearance
- Low dust-off values

A good start for a great result

Getting the growing environment right for seedlings is essential for healthy development. The humic and fulvic acids included in Incotec's GeniusCoat products are known to have a positive effect on nutrient and water uptake. These enhanced conditions benefit root development, accelerate crop establishment and so positively impact the plant's potential to deliver a high-quality crop and increased yield. Disco AG Red L-433 GeniusCoat Zn is a new product for corn which delivers the benefit of zinc addition as well as those of humic and fulvic acids.

What's new?

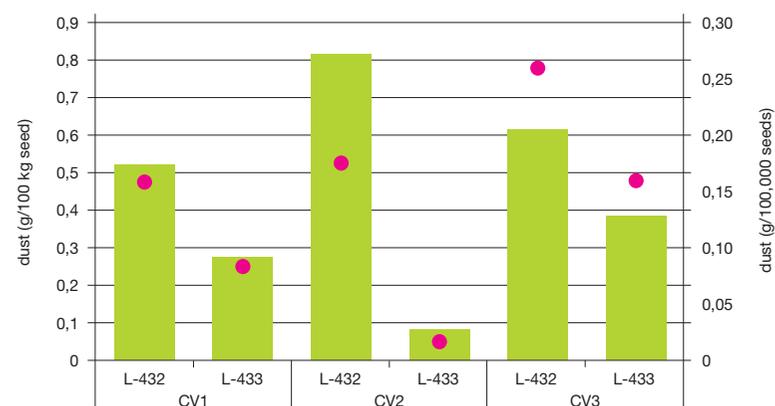

It's the addition of zinc into the formulation that makes the difference. When this essential nutrient is in short supply it can impact early plant development. Disco AG Red L-433 GeniusCoat Zn comes ready to use and delivers this essential nutrient where it is needed - directly to the seed - and when it is needed - directly after sowing. The zinc used in this GeniusCoat formulation is protected by EDTA-chelate. This makes it more readily available than unprotected forms.

Quality you can rely on

All Incotec products are developed using strict quality standards. Disco AG Red L-433 GeniusCoat Zn demonstrates a high-quality cosmetic appearance and dust-off levels have been further reduced. Test results show them to be well within the ESTA and the French PQP norms.

Dust-off

■ dust (g/100 kg seed) ● dust (g/100,000 seeds)

ESTA norm: max 0.75 g/100,000 seeds
PQP norm: max 3 g/100 kg seed
