Part of Croda International Plc

# ORGANIC GROWTH WITH INCOTEC

We do everything within our power to improve seed performance, contributing to global food safety and security. We are committed to minimizing our environmental impact and always look for the most sustainable way to deliver solutions that help our customers achieve their goals.

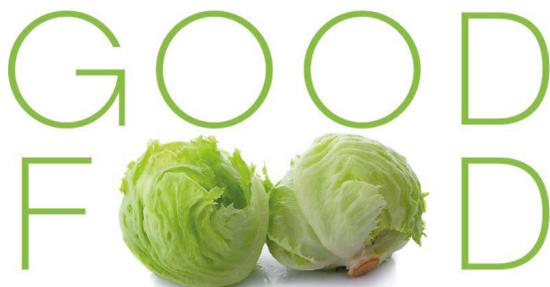

This is why we are developing a growing organic product portfolio. We have a range of film coats, the Disco Classic and Advanced, that may be used in Dutch organic farming. We also offer organic pelleting products, such as our Split Pill for lettuce and chicory and Splash & Grow for celeriac, as well as a broad range of priming products, such as SDR treatment for spinach and the newly introduced Promotor Organic for squash, tomato, brassica, carrot, parsley, pepper and Solanum torvum. Recently we added a number of organic upgrading products: X-ray 2.0 Organic tomato, X-ray eXpress Organic tomato and X-ray Organic pepper.

### **Organic growth**

Incotec contributes significantly to the growth of vegetables and field crops by making higher yields possible. This supports a steady food supply for a growing world population and at the same time reduces the use of crop protecting products and other additives.
