

### The sustainable choice in coating for vegetable seeds

Seeds need protection and nourishment and the various products that provide this must be applied safely and effectively. Film coating is a good way of doing this. Our film coats have excellent adhesion properties and keep plant protection products and biologicals all within the thin film coat layer. We offer two product lines for vegetable film coats: Disco Classic and Disco Advanced. All products in this range may be used in Dutch organic farming.

Incotec has in-depth knowledge of seed biology, application techniques and chemistry.

As part of Croda, we have access to leading formulation technology which enables advanced and innovative film coats and coatings. Our products are carefully tailored to the unique and specific needs of the crop.

All over the world, Incotec offers smart solutions, adapted to local needs and conditions.

#### Benefits of Incotec's vegetable film coats

- Allows direct seed application of plant protection products for precise and efficient protection
- High-quality appearance and good visibility
- Low dust emissions for a safe working environment
- May be used in Dutch organic farming

#### What goes on the seed, stays on the seed

Our Disco film coats ensure efficient use and even distribution of ingredients on the seed surface, excellent coverage, a top-class cosmetic result and low dust-off.

To maximize your process efficiency, all our film coats are designed to allow coated seeds to flow easily whether they have just been coated, or after drying. This increases the speed and ease of handling throughout the entire process.
